

IN THE CLAIMS:

Amend claims 1 and 2 to read:

Sub
B1

A1
1. (Amended) A toner replenishing container for supplying toner to an image forming apparatus comprising:
a container body for storing toner therein;
a cap member attached to a mouth of the container body, the cap member having a toner outlet port and a shutter member for opening/closing the toner outlet port; and
an indication member removably attachable to the cap member to indicate a kind of toner in the container.

Sub
C1
2. (Amended) The toner replenishing container as claimed in Claim 1, wherein the indication member serves as a control member for inhibiting the toner replenishing container from being loaded on a toner supply portion of the image forming apparatus if the indication member does not coincide with a structure of the toner supply portion.

Add new claims 18-20 as follows:

18. A toner replenishing container for supplying toner to an image forming apparatus comprising:
a container body for storing toner therein, the toner body having a plurality of mounting holes; and
at least one indication member which is removably attached to one of the mounting holes to indicate a kind of toner in the container.

19. A method of producing a toner container for supplying toner to an image forming apparatus, said method comprising:
filling the toner container with toner; and

C1
attaching a cap member to the toner container, said cap member having at least one indication member which is inserted into one of a plurality of mounting holes on the cap member to indicate a kind of toner in the container.

20. A method of producing a toner container for supplying toner to an image forming apparatus, said method comprising:

filling the toner container with toner; and

inserting at least one indication member into a plurality of mounting holes on the toner container to indicate a kind of toner in the container.
